Dear Hiring Manager,

I'm a full stack engineer with 9+ years of building web and mobile apps, and I'd like to help your team ship.

I started as a hard coder, writing every line by hand. Over the last few years I've learned to work with AI agents: I plan the work, split it into small tasks, run agents side by side, and review every result. It helps a small team, or one person, deliver faster without lowering quality.

The clearest example is **Daily Quest**, a rewards platform for local shops that I built solo, end to end. It has a customer app and a shop-owner app, both live on iOS and Android, with paid subscriptions. Before that I spent more than five years at Eclaro Business Solutions, where I grew from Senior Full Stack Developer to Senior Solutions Architect, launched features with product and design teams, and introduced AI coding tools to the team.

What I can offer:

- Take a product from idea to MVP launch, and keep improving it afterwards.
- Work mainly in JavaScript and TypeScript, and pick up new languages and tools as the work needs.
- Work well with others: I share what works, write things down, and ask when I'm unsure.

I'd welcome the chance to talk about what you're building and how I can help. Thank you for your time.

Sincerely,
Michael Paul Quimson
